WHAT IS JOB EVALUATION ?

Job evaluation (JE) is a process designed to establish the relative internal value of each position at CONNEX GSM. All positions at CONNEX GSM make different contributions to the success of our company in different ways. These contributions are influenced by the position's Key Result Areas (KRAs), skills, experience and the position's responsibilities. JE analyzes the skills, experience, and responsibilities to determine a position's relative internal value within CONNEX GSM. Positions with higher skills and whose contributions to the organization may be critical will be valued higher than positions that have less skill requirements and less critical contributions.

WHY DO JOB EVALUATION?

JE establishes a consistent and easy way to understand how to measure a position's internal worth. The internal worth for each job determines the job's level in an organization. The position level is the basis for determining what the salary level should be for the position. The salary level is also influenced by CONNEX GSM's compensation philosophy and the external market place.

HOW DOES JOB EVALUATION WORK?

JE is more meaningful when a position is divided into parts. These parts are called compensable factors. Each of these factors reflects which CONNEX GSM values are important for each position and also reflects our values as a company. These compensable factors are assigned points and the total of these points will establish the overall ranking of a position. The ranking or level determines a position's relative worth within CONNEX GSM.

JE and its compensable factors are designed to establish (1) fairness and consistency in determining the internal worth of one job to an other and (2) the basis upon which salary is administered.

JE serves as measuring stick against which to measure and compare the value of positions on the basis of a common denominator. The CONNEX system uses points as the common denominator.

The process of determining the relative value of all positions at CONNEX GSM is subjective to some degree. However, by assigning points to positions, the process becomes more objective and fair. The process is not a scientific one, but can be expected to be reasonably consistent, accurate and flexible.

COMPENSABLE FACTORS AND CONNEX GSM BUSINESS VALUES

The JE Plan covers all positions using six compensable factors. Many of these existed in the previous JE Plan. CONNEX believes these are critical factors that are important to our success and can be found in every job in varying degrees.

CONNEX COMPENSABLE FACTORS

1. **Knowledge**
2. **Communications**
3. **Problem Solving**
4. **Decision Making**
5. **Business Impact**
6. **Working Conditions**

Each of the six compensable factors in the JE Plan are further defined into sub-factors that represent an increasing level of value to CONNEX GSM. Each of these sub-factors have points. This point factor approach requires the user to assign a sub-factor for each compensable factor which best describes the position requirements.

WHAT IS UNIQUE ABOUT THE CONNEX JOB EVALUATION PLAN?

CONNEX GSM has revised its current JE Plan so that it reflects our current business needs and our core business values. Just as CONNEX GSM needs to change business strategies to meet new business needs, its internal systems must also change. The revised CONNEX GSM JE Plan reflects our company's changing business needs. In the Appendix, these values and the JE plan will be discussed in further detail.

HOW DO THE COMPENSABLE FACTORS FIT WITH CONNEX'S CORE BUSINESS VALUES?

This section summarizes how CONNEX GSM's business values are reflected in the compensable factors. Refer to the Appendix for more detailed information about each factor and the associated points.

1 Compensable Factor: KNOWLEDGE

Knowledge and Connex GSM Business Values

One of the company's values is developing effective partnerships. CONNEX GSM employees "partner" with other employees, customers and business partners to share knowledge and expertise. The sharing and transferring of knowledge and experience is an important business driver for success. Knowledge gives employees the ability to make sound business decisions and it supports effective problem solving in their jobs. For employees to be innovative and creative in adding value to their jobs, there must be a solid a foundation of knowledge and experience.

2 Compensable Factor: COMMUNICATIONS

Communications and Connex GSM Business Values

Communications is one of the key success factors in teamwork. Responsive communications and sharing information adds to the effectiveness of a team and ensures that we listen to our customers needs. Open, two-way communications provides the foundation for making teamwork a preferred way to do business. Effective communications is the best way to successfully serve our internal and external customers.

3 Compensable Factor: PROBLEM SOLVING

Problem Solving and Connex GSM Business values

Effective problem solving supports two of our values; innovation and total quality performance. To be innovative and look for continuous improvement, one must be able to solve problems in order to find new ways to support our changing business objectives.

4 Compensable Factor: DECISION MAKING

Decision Making and Connex GSM Business Values

Responding quickly and effectively with sound decisions supports our value of customer focus. Decision making at all levels allows employees to exceed customer expectations.

5 Compensable Factor: BUSINESS IMPACT

Business Impact and Connex GSM Business Values

This factor measures the level of influence the position has on contributing to its department, a customer or company results. The total department's contribution to company results is influenced by the contributions made by each position. Some positions can have a direct impact on their department, customers or company results, while others have an indirect impact. Generally, positions in a support role which provide or maintain information for others have less of an impact than positions which are directly accountable for the final results.

6 Compensable Factor: WORKING CONDITIONS

Working Conditions and Connex GSM Business Values

Employees are our most important asset and the environment that they work in is an important part of their job. Hazardous and stressful environments impact on the employees effectiveness in performing their requirements. These challenges are recognized by considering this factor when evaluating positions.

KNOWLEDGE

Summary

Knowledge is the factor which reflects how much one needs to know to do the full job competently and satisfactorily. This factor does not measure how much knowledge one has. It evaluates what type of knowledge one must have to perform the position's responsibilities, Key Result Areas (KRAs), and objectives.

Basic knowledge refers to the preparation, education, on-the-job-training and work experience required in order to qualify for the position.

Sub-Factor		POINTS
A	**Partial high school completion, or equivalent. No experience.** (For non graduates - 4 years of related experience). These positions follow detailed instructions. Basic reading, writing and mathematical skills.	80
B	**High school graduate or equivalent. 6 to 12 months experience.** (For non graduates - 4 years of related experience). These positions follow instructions and understand procedures.	160
C	**High School graduate or equivalent, plus specialized courses. 1 to 2 years experience.** (For non graduates - 6 years of related experience). These positions follow general office procedures, assignment oriented, varied duties within own area of responsibility.	240
D	**College diploma or equivalent. 2 to 3 years experience.** (For non graduates - 10 years of related experience). These positions follow moderately complex procedures and assignments. These positions require the basic understanding of a entry level professional and are tactically focused.	320
E	**Undergraduate university degree or equivalent. 4 to 6 years experience.** (For non graduates - 12 years of related experience). These positions are for experienced professionals or department managers.	400
F	**Undergraduate university degree or equivalent. 8 to 10 years experience.** (For non graduates - 16 years of related experience). These positions are for seasoned management positions and are strategically focused in the area of responsibility. Seasoned professionals that have very rare skills.	480
G	**Education same as F, some may have graduate degree. 10+ years experience.** (For non graduates - 20 years or related experience). These positions are for senior executives who have a significant strategic impact on the organization.	560

COMMUNICATIONS

Summary

This factor considers the oral and written communications skills required to accomplish the position's key responsibilities. In addition, there is a range of communications skills, from providing oral or written information for standard requests, to persuading and influencing various audiences. Some examples include selling concepts or ideas to external customers, or communications involving managing people. The level of integrity and discretion that is required for the protection of confidential information is also considered.

Sub-factor		POINTS
A	**Basic conversational and written skills -** courtesy to others exchanging and requesting information. Not confidential.	85
B	**Moderate conversational and written skills -** required to use some persuasion skills to influence people to get them to provide information or services. Somewhat confidential.	170
C	**Persuasion skills -** understanding, influencing and/or serving people are important. Skills of persuasion are required to influence others. Somewhat confidential.	255
D	**Well developed communications skills -** with other people at most levels, external or internal to the organization. Requires the employee to have a well developed understanding of human relations so that he/she can influence behavioral change. Mostly confidential.	340
E	**Critical communications -** with other people at all levels, external or internal to the organization that requires the incumbent to influence or change behavior. Very confidential.	425

PROBLEM SOLVING

Summary

This factor refers to the type of thinking necessary to solve the problems encountered in performing the major responsibilities of the position. It measures the level of difficulty in using analytical and judgment skills that involve identifying, searching and selecting the best available action in resolving problems.

Sub-factor		POINTS
A	**Very little analytical ability required** - each problem situation is nearly the same as the last one. Very close supervision.	80
B	**Some analytical ability** - problems are similar but not difficult. Supervision is readily available.	160
C	**Moderate analytical ability** - problems are different where some choice is required. Supervisory review when required.	240
D	**Different problems within area of knowledge** - latitude to consider many different ways to solve problems. Some creativity and initiative required. Supervisory review when problems become too complex.	320
E	**Diverse problems** - thinking required to solve difficult problem situations. High degree of original and independent thinking required.	400
F	**Very diverse problems** - thinking to solve problems requires a lot research, complicated analysis, selecting the answer from many choices, and selling the idea.	480
G	**Strategic problems** - associated with managing a function where the requirement to integrate various departments into an effective unit is critical.	560

DECISION MAKING

Summary
Every position makes decisions in order to meet its specific objectives within an established work environment. This work environment has established procedures and reporting relationships in order for an incumbent to take action or make a decision. Consideration is given to how a position is limited by instructions, rules, procedures, precedents and policies, as well as the degree of freedom, guidance or supervision required to make decisions.

Sub-factor		POINTS
A	**Few, simple decisions** - clear instruction on what to do; ordinary, simple decisions directly related to the job.	80
B	**Routine decisions** - methods and procedures are well defined; routine decisions related to following specific instructions.	160
C	**Standard decisions** - some unexpected events requiring decisions to fit the situation.	240
D	**Independent decisions** - can modify established procedure to achieve results.	320
E	**Complex decisions** - has authority to decide if consistent with functional policy.	400
F	**Many complex decisions** - continuous requirement for rapid and flexible decision making.	480
G	**Far reaching decisions** - long term strategic implications to the company.	560

BUSINESS IMPACT

Summary

Measures the level of influence the position has on contributing to its department, customer or company results. The total department's contribution to company results is influenced by the contributions made by each position. Some positions can have a direct impact on their department, customers or company results while others have an indirect impact. Generally, positions in a support role, which provide or maintain information for those who advise, analyze or recommend to others usually have less of an impact than those positions which are directly accountable for the final results.

Sub-factor		POINTS
A	**Limited** - little or no impact on company results.	**140**
B	**Some** - minor impact, work usually pre-checked.	**280**
C	**Influential** – advise, analyze as a support service, can influence results.	**420**
D	**Direct** – major accountability and impact on the company's results.	**560**

WORKING CONDITIONS

Summary

Working conditions describes the physical environment in which the work is performed. Especially important are any conditions in the physical environment which the employee may find unpleasant or hazardous. Some aspects of the work environment may negatively affect his or her physical well-being.

In some positions there can be conditions that cause stress. These include dealing with difficult situations (usually external), work activities under strict deadlines, whether scheduled or not, the frequency of interruptions and whether extensive overnight travel is required. Each person reacts to these stress factors differently, however, the critical test is to focus on what the typical situation may be.

Sub-factor		POINTS
A	**Minimal** - clean, climate controlled office, no hazards Very little work related stress.	**45**
B	**Moderate** - comfortable but not clean or quiet, some hazards. Some work related stress.	**90**
C	**Considerable** - unclean, noisy environment, substantial risk of hazards within safety standards. Work related stress due to critical deadlines.	**135**

POSITION TITLE: Fleet Manager
DEPARTMENT: Administration
REPORTS TO: Director, Administration
DATE: May 22nd 1998
STAFF REPORTING TO:

- Drivers (37)
- Fleet Coordinator (2)
- Admin. Assistant

PURPOSE OF POSITION:
Oversees the operation and maintenance of company owned and leased motor vehicles and ensures that effective transportation arrangements for employees are in place.

QUALIFICATIONS:
Degree in business or equivalent. Three years in the transportation industry.

PRIMARY RESPONSIBILITIES:

- Ensures that all staff are fully trained in department policies and procedures, that they have established KRA's and objectives in place, and that they are motivated and performing the established standards. This requires the employee to set staff objectives, review their performance and where required, take corrective action to deal with below standard performance. When warranted, the employee makes salary recommendations for the staff.

- Develops the department's annual budget and monitors the results on a monthly basis to assess any variances. Negative variances are investigated and explained to his/her manager and a process is developed to prevent future negative variances.

- Directs the planning, coordinating and evaluation of the department's overall results on a weekly basis and takes corrective action within departmental guidelines when negative variances appear. This requires the employee to be proactive in customer needs so that potentially negative situations can be anticipated and dealt with before they become a problem. The focus is excellence in customer service in order to maintain acceptable levels of customer satisfaction.

- Plans, organizes, directs, and controls the operations of company owned or leased motorized vehicles. This activity includes ensuring that regular maintenance of the vehicles is performed in a timely and cost effective manner; monitoring fuel consumption of all vehicles; scheduling repairs resulting from accidents, and developing related accident policies for the driver to follow; and arranging daily car and shuttle schedules for employees and visitors.

- Participates in preparing motorized vehicle lease or purchase and parts agreements with suppliers. This requires this employee to negotiate terms, conditions, and prices which are favorable to the company. He/she will also enter into negotiations with other suppliers for services such as car washes, small repairs, and safety inspections. The critical focus is to provide motorized vehicles that are reliable, safe, and economical to operate.

- Ensures that all the drivers are fully trained in safe driving techniques not only to ensure the safety of his/her passengers but also to promote the image of the company and protect company assets.

- Working conditions are clean and climate controlled when in the office. When outside, there can be exposure to dirt, noise, and temperature fluctuations which may be unpleasant. The potential for accidents is higher in these outside areas. Interruptions are frequent and deadlines are critical.

POSITION TITLE: Direct Sales Executive
REPORTS TO: Area Sales Manager
STAFF REPORTING TO: None

DEPARTMENT: Direct Sales
DATE: May 22nd 1998

PURPOSE OF POSITION:
Sells company products and services by interacting with established small to medium size customers and by developing new prospects

QUALIFICATIONS:
Degree in business or equivalent. Two years of technical selling experience.

PRIMARY RESPONSIBILITIES:

- Sells company products and services to existing customers by proactively or reactively promoting new service or product introductions. This requires the employee to understand fully the customer's needs and assess whether these needs are being met. If they are not, he/she proposes a revised package of products and services to the customers. Part of the job requires the employee to maintain an effective and professional relationship with the customer so that he/she remains committed to the company's products and services.

- Develops new prospects by following up on leads acquired through a variety of sources. The employee must be knowledgeable about company products and services, about key competitor products and services, and must be able to develop a convincing case against the competition.

- Meets or exceeds sales targets for his/her customer base through well planned sales executions, proactive selling, understanding the business environment and excellent customer service. Any negative sales performance must be dealt with immediately and assistance should be sought if required.

- Delivers the ordered product and services to the customer as defined by the purchase contract; that is, on time, in full working order, and with supporting instructions. Upon delivery, the employee trains the customer in the various features of the terminal, outlines the technical support services, and ensures the customer is comfortable with the product before leaving.

- Deals with any invoicing and payment issues that may arise with established customers to resolve them. Routine problems are resolved by the employee while complex problems are referred to the Area Sales Manager.

- Working conditions are clean and climate controlled when in the office. When outside, there can be exposure to dirt, noise, and temperature fluctuations which may be unpleasant. The potential for accidents is higher due to extensive travel and the areas which are visited. Interruptions can be frequent and deadlines are critical.

1430

POSITION TITLE: Chief Accountant **DEPARTMENT:** Finance
REPORTS TO: Financial Controller **DATE:** May 22nd 1998
STAFF REPORTING TO:

- Accounts Payable Manager
- Fixed Assets Specialist
- Inventory Specialist
- Financial Analyst
- Roaming and Interconnection Specialist
- Tax Specialist
- Reporting Assistant

PURPOSE OF POSITION:
Manages the accounting operation covering inventory, fixed assets, accounts payable, revenue recognition, and financial statements in compliance with Romanian GAAP requirements. To do this, the employee must have well trained, knowledgeable, and motivated staff as well as effective communications with all related departments and external customers (auditors, legal authorities, banks, suppliers, clients, shareholders).

QUALIFICATIONS:
Business degree with a certified professional designation in accounting (Expert Accountant CECCAR) or equivalent. Five years of progressive accounting experience with a Romanian GAAP. This position requires a comprehensive understanding of accounting practices and a thorough knowledge of Company accounting practices and procedures. This allows the employee to properly use judgement in recording the results of the company.

PRIMARY RESPONSIBILITIES:

- Ensures that all staff are fully trained in department policies and procedures, that they have established KRA's and objectives in place, and that they are motivated and performing to established standards. This requires the employee to set staff objectives, review their performance and where required, take corrective action to deal with below standard performance. When warranted, the employee makes salary recommendations for the staff.

- Prepares and reviews all corporate and confidential financial statements according to Romanian GAAP accounting standards, and tax and legal requirements within established deadlines. This includes reconciliation of Romanian to U.S. GAAP Reports. These statements must be accurate, easily understood and useful to the internal and external customers who analyze and interpret them. To this end, the employee is required to assist the customer with interpretation and effective use of the financial information. A critical part of this information service is to provide financial variance analyses of the operating results by comparing actual amounts to those forecast and by identifying deficiencies and problem areas as required.

- Meets with auditors and government bodies to plan, coordinate, and provide all required audit information in an accurate and timely manner according to acceptable audit standards. The employee is required to respond to questions and supply missing information. The employee also works to improve the efficiency of the audit by reducing the workload required of staff who answer auditor questions, suggesting ways to improve the services of auditors, and seeking the lowest audit fees.

- Performs and/or oversees special reviews of the general ledgers by analyzing and reconciling the various accounts. This requires in-depth analyses to verify that the correct postings and offsets have been made. Determines why certain problem areas have occurred and makes recommendations within standard policy to correct the situation. This may require the employee to reallocate items in the account or recommend system changes which may have an impact on the financial statements' reporting. Any changes have to be approved and well documented.

- Ensures that internal accounting policies and procedures, as well as various internal departmental standards and Romanian laws, are applied concerning fixed assets, inventory revenue, accounts payable, and taxes. This requires the employee to develop and monitor accounting systems which are accurate and which maintain the various ledgers.

- Conducts special analytical studies of existing department policies, procedures and systems and investigates possible improvements. Provides input regarding problems and enhancements to existing and future computerized accounting systems within the department, by drafting the requirements to the systems department. The employee is directly involved with the implementation of the new or enhanced systems in the department and assists the systems personnel in overcoming any problems that occur.

- Daily tasks involve analyzing reports, contracts, agreements, interpreting laws and regulations, methodological norms, applying them to company's specific activity, and reviewing financial data.

- Working conditions are clean and climate controlled in an open office area. Interruptions can be frequent and deadlines are critical and inflexible. There is also the expectation that the employee will work some longer hours at peak times.

1885

POSITION TITLE: Financial Analyst
REPORTS TO: Chief Accountant
STAFF REPORTING TO:

- Revenue Assistants (3)

DEPARTMENT: Finance
DATE: May 22nd, 1998

PURPOSE OF POSITION:
Analyzes and registers the different types of company revenues for use in strategic planning and performance benchmarking.

QUALIFICATIONS:
Degree in finance or equivalent. Two years of experience in financial environment.

PRIMARY RESPONSIBILITIES:

- Ensures that all staff are fully trained in department policies and procedures that they have established KRA's and objectives in place, and motivate them are motivated and performing to the established standards. This requires the employee to set staff objectives, review their performance and where required, take corrective action to deal with below standard performance. When warranted, the employee makes salary recommendations for the staff.

- Requires and uses the knowledge of US GAAP and Romanian accounting rules.

- Documents and registers the various types of company revenues while ensuring that each type is properly allocated. This is critical for the accurate analyses of post company performance and any corrective actions that may be required. To this end the employee will determine whether the procedures and practices employed are in the best interest of the company and within the framework of company policies.

- Develops, analyzes and prepares detailed variance analysis and sales ratios from plan of company revenues. A critical part of this information service is to provide revenue variance analysis of the operating results by comparing actual to forecast and identifying deficiencies and problem areas.

- Oversees the invoice issuing process (billing review) to ensure that procedures are followed, that exchange rates, bill plans, and tariffs are applied properly and invoicing is performed on time in an accurate manner. To do this the employee will review a sample of invoices to determine their accuracy before being sent out to customers.

- Participates in special ad hoc revenue related analysis on new projects that require detailed and complex financial modeling in areas that may be somewhat unfamiliar.

- Updates prices for products for dealers, the corporate stores and direct sales. The employee has to ensure that good communication with the sales and marketing areas of the company is maintained to ensure that pricing and revenue reports are well understood.

- Oversees accounting entries related to sales revenue, reconciliation of inventory, and approval of entries.

- Working conditions are clean and climate controlled in an open office. Unpleasant situations are infrequent. Monthly deadlines are important.

POSITION TITLE: Product Manager
REPORTS TO: Manager, Service Development
STAFF REPORTING TO: None

DEPARTMENT: Marketing
DATE: May 22nd 1998

PURPOSE OF POSITION:
Oversees and prioritizes product development (customer oriented packages and services) from launch to exit of project.

QUALIFICATIONS:
Degree in marketing or equivalent. Two years of marketing experience in customer goods packaging.

PRIMARY RESPONSIBILITIES:

- Provides a strong cross functional coordination with marketing and the company's technical departments (Operations, I.T.) in bringing new products and services to market. He/she determines the areas that need to be focused on for the company to gain its greatest competitive advantage by working closely with other departments. To do this the employee must be able to balance both the urgency of new product introductions and the need for quality and acceptable levels of product performance with involvement from various departments.

- Assists in the development of the company's strategic portfolio position for new products and services. He/she helps to sell how these concepts may contribute to a competitive advantage, what the return on investment would be and the financial success for the company. It is critical that the employee be knowledgeable about competitive practices and market trends as well as the soundness of a concept from the technical perspective.

- Prioritizes new product and service development initiatives by focusing the group to determine the potential financial impact and customer acceptability of any new product or service idea. To do this he/she must be able to assess quickly probable success/failure potential before too much time and expense has gone into development of the product or service.

- Acts as the in-house information specialist for all information, specifications, operating advice etc. to other departments which require assistance. To do this he/she must be well prepared to handle information about the new products or services in a consistent manner.

- Assesses the product's performance after launch to determine whether expectations are being met. He/she must act quickly in this assessment to decide whether changes should be made to specifications or features of the product or service.

- Working conditions are clean and climate controlled when in the office. When outside, there can be exposure to dirt, noise, and temperature fluctuations which may be unpleasant. The potential for accidents is higher in these outside areas. Interruptions are infrequent and deadlines are critical. Long hours are usually associated with product/service launch.

POSITION TITLE: HR Development Manager
REPORTS TO: VP, Human Resources
STAFF REPORTING TO:

- Training Specialists (2)
- HR Specialist
- Development Coordinator

DEPARTMENT: Human Resources
DATE: May 22nd 1998

PURPOSE OF POSITION:
Plans, develops, and oversees company training programs by both designing in-house programs and coordinating training requirements with outside suppliers. The employee also writes and administers HR development policies and procedures.

QUALIFICATIONS:
Degree in Social Sciences or equivalent. Three years of progressive experience in an HR department.

PRIMARY RESPONSIBILITIES:

- Ensures that all staff are fully trained in department policies and procedures, that they have established KRA's and objectives in place, and that they are motivated and performing to the established standards. This requires the employee to set staff objectives, review their performance and, where required, take corrective action to deal with below standard performance. Where warranted, the employee makes salary recommendations for the staff.

- Designs, develops and effects delivery of company training programs. To do this, the employee must understand the needs of the business, know the training programs available externally, and decide whether to purchase training programs or design a program in-house.

- Assesses the current skill levels of company employees in terms of productivity and effectiveness and if any improvement areas are found, he/she will develop a training model/concept designed to correct the situation and present it to management. The major challenge for the employee is selling the concept to management and demonstrating how the proposal will positively impact their business. The employee must decide on training processes which will allow effective transfer of learning back to the work place to bring about the desired job related behavior changes.

- Writes, prepares, and administers HR development policies and procedures to ensure that effective guidance and direction is established. These enable all employees to understand the requirements of their role with the company and serve as a guide for managers when managing their staff.

- Oversees the development, scheduling and delivery of in-house training programs, which include new hire orientation, customer service, language instruction, and management development skills. The employee is also required to oversee the preparation of instructional training manuals to ensure the programs are effective in setting standards of excellence for training. The employee will also conduct post assessment training.

- Determines which training programs should be contracted out to training consultants and takes an active role in the selection of these consultants Sets the parameters for the training programs, which include price, design, delivery, quality, and content. The employee will follow-up with assessments of the training sessions to ensure the effectiveness of the process and to recommend design and process changes.

- .Working conditions are clean and climate controlled in an open office area. There is some exposure to unpleasant situations. Interruptions can be frequent and deadlines are usually critical.

POSITION TITLE: Radio Frequency Technician
REPORTS TO: RF Engineer
STAFF REPORTING TO: None

DEPARTMENT: RF Department
DATE: May 22nd 1998

PURPOSE OF POSITION:
Conducts experiments and tests of the network and potential cell sites and tabulates and compiles the test data for use by the department.

QUALIFICATIONS:
High School diploma or equivalent with post secondary school courses in tower and roofing. One year experience in use of electronic test equipment.

PRIMARY RESPONSIBILITIES:

- Performs cross country drive-by tests for potential cell sites by using sophisticated test equipment. This requires the employee to set up transmitters on high tower antennas, rooftops and mountains using power measurement tools to ensure proper installation. The installation procedures are guided by detailed test manuals that require electrical and mechanical knowledge. Part of the process includes performing special tests for new configurations and related performance assessments. To do this effectively, the employee must be aware of the specifications and the acceptable levels of performance required to prepare a favorable report.

- Collects real network test information by driving along the route specified by the R.F. Engineer. Must be familiar with the requirements of safe and acceptable standards during the testing phase, must be able to set up and operate the necessary equipment to perform tests with valid and reliable results. When the test is completed, a detailed report is assembled to show the performance levels for each geographic location. During his/her drive, the employee looks for new sites and conducts tests to determine their suitability for further investigation.

- Performs site changes as directed by the R.F. Engineer so that the potential site can be reconfigured or adjusted in order to enhance the performance of the radio frequency transmissions and achieve an acceptable level of performance. When changes are made to the site, the employee repeats drive tests, collects new information, and assist in the analyses of test results and in the interpretation of their meaning and significance with respect to the site under test.

- Conducts required preventative maintenance on the test equipment to ensure that its precision and measurement capabilities are fully operational.

- Working conditions are clean and climate controlled when in the office. When outside, there can be exposure to dirt, noise, and temperature fluctuations which may be unpleasant. The potential for accidents is higher due to extensive travel and the areas which are visited. Interruptions can be frequent and deadlines are critical.

POSITION TITLE: Mgr., Systems Operations **DEPARTMENT:** IT
REPORTS TO: ~~Sr. Manager~~, IT **DATE:** May 22nd 1998
DIRECTOR

STAFF REPORTING TO:

- VMS Administrator
- SQL Data Base Administrator (2)
- Ingres Table Data Base Administrators
- Sr. Systems Operator
- Billings Distribution Supervisor

PURPOSE OF POSITION:

Plans, directs and organizes the day to day activities of the IT Department to ensure that all staff are focused on providing a high quality and reliable IT service to the company.

QUALIFICATIONS:

Degree in computer science or equivalent. Five years of progressive experience in the internal network field.

PRIMARY RESPONSIBILITIES:

- Ensures that all staff are fully trained in department policies and procedures, that they established KRA's and objectives in place, and that they are motivated and performing to established standards. This requires the employee to set staff objectives, review their performance and where required, take corrective action to deal with below standard performance. When warranted, the employee makes salary recommendations for the staff.

- Develops the department's annual budget and monitors the results on a monthly basis to assess any variances. Negative variances are investigated and explained to his/her manager and a process is developed to prevent future negative variances.

- Directs the planning, coordinating and evaluation of the department's overall results on a monthly basis and takes corrective action within departmental guidelines when negative variances appear. This requires the employee to be proactive in customer needs analysis so that potentially negative situations can be anticipated and dealt with before they become a problem. A close liaison with Sales, Engineering, Customer Operations and Finance must be maintained. The focus is excellence in customer service in order to maintain acceptable levels in the IT department are maintained.

- Ensures that the company's information system hardware and software meet business needs by planning equipment software and resource needs. To do this he/she consults with various departments to define and identify their specific needs, both currently and anticipated for business systems, information management and communications. To perform this role effectively, the employee is required to stay abreast of his/her developments in the field and be fully aware of their customer's requirements.

- Oversees the development of systems to ensure that they fall within the framework of the project's specifications, respect the company's technological standards, protect the integrity of company data, and meet resource and budget requirements. Part of this activity is to ensure that new equipment and software are introduced in an effective manner by monitoring progress with respect to plans and commitments, providing for evaluation of equipment and software performance and by training users. The key focus is operating an effective computer infrastructure that is cost effective, fully supported, dependable, simple to use, secure and fast.

- Negotiates the terms, conditions, and price with all vendor service agreements such as contract administration, maintenance service, upgrades, and vendor resources. In this capacity the employee must pay a lot of attention to details and be fully aware of unclear language and terms. Follow up of vendor performance levels is a key focus of the job in order to ensure that all conditions are met. The employee is required to take immediate corrective action with the vendor to resolve any issues such as non compliance on the vendor's part.

- Working conditions are clean and climate controlled in an open office area. There is some exposure to unpleasant situations. Interruptions can be frequent and deadlines are usually critical. Is required to be on call.

POSITION TITLE: Data Base Administrator **DEPARTMENT:** IS
REPORTS TO: IS ~~Team Leader~~ MANAGER **DATE:** May 22nd 1998
STAFF REPORTING TO: None

PURPOSE OF POSITION:
Implements and maintains the database designed by the development team.

QUALIFICATIONS:
Degree in computer science or equivalent. Three years experience in the data administration field.

PRIMARY RESPONSIBILITIES:

- Implements the various configurations required by the supplier and internal clients into the database. He/she ensures that program requirements and systems specifications are followed closely. This involves creating tables, indexes, etc. according to the Data Architect's specifications and requirements, as well as acting as a technical resource to the Data Architect team and to the Systems Analysts in the department.

- Works with the Systems Supplier and Systems Administrator to develop, implement and test plans, test the data base design, prepare systems documentation and troubleshoot any problems that may arise. These tests are conducted to ensure that flexibility of the application/platform is captured and that the specified architectural specifications set out for the database are met. The key focus is to provide the highest quality standards reliably, and consistently.

- Assists in database maintenance in areas such as access methods and times, validation checks, protection and security, documentation guidelines and statistical methods. This activity also includes the maintenance of database dictionaries, overall monitoring of standards and procedures, and integration of systems through database designs. The key focus is to maintain and enhance the integrity of the database.

- Specifies the information necessary to implement the production system by documenting such areas as database configuration, creating tables and indexes gaining access, creating backup files and recovering lost data. To do this he/she will follow detailed guidelines in order to ensure that the database is well managed and maintained so that minimal risk of database related problems arise.

- Working conditions are clean and climate controlled in an open office area. There is some exposure to unpleasant situations. Interruptions can be frequent and deadlines are usually critical.

DEPARTMENT: Information Systems
DATE: May 22nd 1998

PURPOSE OF POSITION:
Analyzes projects and writes computer programs and procedures by encoding sets of instructions into computer readable form

QUALIFICATIONS:
Degree in computer science or equivalent. Two years of programming experience.

PRIMARY RESPONSIBILITIES:

- Installs, maintains and modifies existing programmed systems and develops new systems by putting encoding instructions and algorithms into computer readable form. He/she must be well versed in "functional spec." requirements so that she/he can deliver software line with the requirements of the customer. This requires the employee to ensure that the final product meets quality standards, that it is compatible with the data model and that it has minimal negative impact on other data models.

- Revises and creates technical documentation (release notes, known bugs, installation and operating procedures) for the affected program(s) so that they accurately reflect the revised new application. After the program has been installed, the employee will train the trainers and work closely with the users to ensure that they understand and use the program effectively. After installation, he/she will have frequent contact with the users in order to identify any potential problems or revisions and make the necessary changes.

- Working conditions are clean and climate controlled in an open office area. There is some exposure to unpleasant situations. Interruptions can be frequent and deadlines are usually critical.

POSITION TITLE: Customer Service Mgr. **DEPARTMENT:** Customer Operations
REPORTS TO: VP Customer Operations **DATE:** May 22nd 1998
STAFF REPORTING TO:

- Customer Service Team Leaders (10)

PURPOSE OF POSITION:
Ensures that both current and potential customers receive the highest level of courteous and professional service possible. To do this, the employee must have well trained, knowledgeable, and motivated staff and communicate effectively with all related departments.

QUALIFICATIONS:
Business degree or equivalent, with three years of experience in the customer service field.

PRIMARY RESPONSIBILITIES:

- Ensures that all staff are fully trained in department policies and procedures, that they have established KRA's and objectives in place, and that they are motivated and performing to established standards. This requires the employee to set staff objectives, review their performance and where required, take corrective action to deal with below standard performance. When warranted, the employee makes salary recommendations for the staff.

- Develops the department's annual budget and monitors the results on a monthly basis to assess any variances. Negative variances are investigated and explained to his/her manager, and a process is developed to prevent future negative variances.

- Directs the planning, coordinating and evaluation of the department's overall results on a weekly basis and takes corrective action within departmental guidelines when negative variances. This requires the employee to be proactive in market or customer needs analysis so that potentially negative situations can be anticipated and dealt with before they become a problem. A close liaison with Sales, Engineering, Finance, Marketing, IT and other departments within Customer Operations must be maintained. The focus is excellence in customer service in order to maintain acceptable retention levels of customers.

- Resolves difficult and complex customer service issues as quickly as possible by following company policy. Departure from policy needs approval by the V.P. Customer Operations. Such issues be factored into the business plan in order to eliminate them from possible reoccurrence.

- Advises management on appropriate policies and strategies to adopt in order to promote the company reputation for after-sales service. He/she must understand competitive practices, and the cost budget analyses ratios for each policy. He/she must determine if there is a fit between policy development and company values and if the strategy adopted will enhance company performance in service level churn rate, talk time, abandon rates, call volume and TSF.

- Work environment is clean and climate controlled in a confined open space. Complaints from customers can be stressful, as well as maintaining customer retention levels.

POSITION TITLE: Warehouse Logistics Manager **DEPARTMENT:** Logistics
REPORTS TO: Dir., Product Acquisition & Distribution **DATE:** May 22nd 1998

STAFF REPORTING TO:

- SIM Card Reps.
- Inventory Coordinator
- Order Fulfillment Supervisor
- Warehouse Supervisor

PURPOSE OF POSITION:

Plans, organizes, and oversees the flow of company products and supporting documents between sales entry, final delivery, and invoicing.

QUALIFICATIONS:

Degree in engineering or equivalent. Three years of progressive warehouse and distribution experience.

PRIMARY RESPONSIBILITIES:

- Ensures that all staff are fully trained in department policies and procedures, that they have established KRA's and objectives in place, and that they are motivated and performing to established standards. This requires the employee to set staff objectives, review their performance and where required, take corrective action to deal with below standard performance. - Develops the department's annual budget and monitors the results on a monthly basis to assess any variances. Negative variances are investigated and explained to his/her manager, and a process is developed to prevent future negative variances.

- Directs the planning, coordinating and evaluation of the department's overall results on a weekly basis and takes corrective action within departmental guidelines when negative variances appear. This requires the employee to be proactive in dealing with problems so that potentially negative situations can be anticipated and dealt with before they become a problem. A close liaison with Sales, Engineering, Marketing, Finance and IT must be maintained. The focus is excellence in customer service in order to maintain acceptable performance levels.

- Develops and recommends policies related to distribution networks for company products, transportation of the product and the overall operation of the distribution process. To do this he/she evaluates the profitability and efficiency of these networks and transportation costs and makes the necessary revisions and adjustments to keep costs in line with expected targets. The key focus is to minimize costs and improve delivery times.

- Oversees the activities related to incoming and outgoing products and materials from the warehouse and ensures they are stored, handled and organized in the most efficient and cost effective way. Part of this activity is to ensure that all supporting documents for all moving goods are accurate, match the goods when received and when shipped and that the goods are not damaged or spoiled.

- Monitors records of materials and products in inventory and on order and provides reports to management in an accurate and timely manner. Part of this activity requires the employee to implement methods which minimize inventory carrying charges, reduce waste of product and materials, enhance productivity improvements, and provide statistics and related efficiency reports. When any negative variance appears, the employee is expected to take corrective action immediately.

- Working conditions are clean and climate controlled in an open office area. Physical environment can be unclean, noisy and dusty. There is some exposure to hazardous situations. Interruptions can be frequent and deadlines are usually critical.

STAFF REPORTING TO:

- Facility Managers (5)

PURPOSE OF POSITION:
Oversees the general administrative functions and physical operations of the company's properties. This also includes overseeing the development and design of the company's buildings and equipment facility plan.

QUALIFICATIONS:
Degree in mechanical/civil engineering or equivalent. Five or more years in the construction industry.

PRIMARY RESPONSIBILITIES:

- Ensures that all staff are fully trained in department policies and procedures, that they have established KRA's and objectives in place and that they are motivated and performing to established standards. This requires the employee to set staff objectives, review their performance and where required, take corrective action to deal with below standard performance. When warranted, the employee makes salary recommendations for the staff.

- Develops the department's annual budget and monitors the results on a monthly basis to assess any variances. Negative variances are investigated and explained to his/her manager and a process is developed to prevent future negative variances.

- Investigates equipment failure in the facility and determines the need for repairs or other corrective action. The employee will work with the engineering staff and maintenance personnel to ensure that the repair of the buildings, equipment and general grounds are completed on time and within budget and according to city and country building codes.

- Schedules regular preventative maintenance according to warranties and safety standards in a manner that is of minimum inconvenience to facility tenants. The employee negotiates the terms, conditions and price of this maintenance with external contractors and oversees the project in order to ensure compliance with the signed contractual agreement.

- Develops a customer service oriented relationship with tenants by providing immediate assistance on request, signing arrangements which are of mutual benefit, and dealing with space allocations and general improvements in the facility.

- Working conditions are clean and climate controlled when in the office. When outside, there can be exposure to dirt, noise, and temperature fluctuations which may be unpleasant. POSITION TITLE: Promotion Project Mgr. **DEPARTMENT:** Marketing, A & R
REPORTS TO: Mgr., Acquisitions & Retention **DATE:** May 22nd 1998
STAFF REPORTING TO: None

PURPOSE OF POSITION:
Develops, implements and evaluates sales promotions and integrates promotional and co-marketing programs to maximize their effectiveness in supporting customer acquisition objectives and enhancing the company's market leadership.

QUALIFICATIONS:
Degree in marketing or equivalent. Three years in progressive areas of marketing.

PRIMARY RESPONSIBILITIES:

- Provides assistance in establishing the parameters for marketing the company's products and services. To do this the employee must be aware of market trends, new product and service developments in the industry, competitor practices and customer product preferences. He/she needs to assess the characteristics of the company's products and services and provide feedback on the A&R Department's recommended promotional strategies.

- Creates and designs sales, promotions and co-marketing programs to promote the company's products and services. To do this the employee has a variety of options at his/her disposal; these include various advertising mediums, special marketing events, sports and music events and consumer and trade shows. Works with various internal sales marketing departments (marketing, sales, customer operations) to ensure that promotional campaigns are executed according to the specified tactical plans.

- Develops and implements processes which measure the effectiveness of promotional and co-marketing programs. He/she evaluates the results and develops corrective processes to be implemented for the next promotion. The focus is on continuous improvement, better management of marketing resources and determining whether there was an acceptable return on the marketing investment for the promotion.

- Prepares and negotiates the terms and conditions under which the various co-marketing partners will operate during the various promotion campaigns. He/she will ensure that the campaigns are staffed with competent people, that deadlines and budgets are met and that all staff understand their roles. Any negative variances are corrected by the employee.

- Working conditions are clean and climate controlled when in the office. When outside, there can be exposure to dirt, noise, and temperature fluctuations which may be unpleasant. The potential for accidents is higher due to extensive travel and the areas which are visited. Interruptions can be frequent and deadlines are critical.

POSITION TITLE: BTS Engineer
REPORTS TO: BTS Manager
STAFF REPORTING TO: None

DEPARTMENT: Operations & Maintenance
DATE: May 22nd, 1998

PURPOSE OF POSITION:
Ensures that systems are up and running cost effectively with a minimum of down time. To do this, he/she maintains and repairs digital cellular and microwave radio system equipment, as well as auxiliary systems. This requires the employee to be on call whenever required.

QUALIFICATIONS:
Degree in engineering or equivalent. Four years of experience in the maintenance of telecommunication systems.

PRIMARY RESPONSIBILITIES:

- Responds to emergency calls when there is a failure in the cellular, microwave or ancillary equipment. When on site, the employee investigates the probable cause of the malfunction and develops an action plan to correct the problem in the most cost effective and timely manner. He/she performs the required repairs, or directs on-site crews to do so.

- Performs routine preventative maintenance on all site equipment according to established schedules and vendor contract warranties. Part of this activity requires the employee to conduct tests with different types of sophisticated equipment in order to determine potential problems and identify substandard performance. In this capacity the employee must decide whether to replace components which appear to be in good condition and must therefore know quality standards, warrantees and safety regulations. The employee is required to maintain close contact with NMC, OMC, MSC or staff during the repair or preventative maintenance project, in order to keep all interested parties informed of progress, deal with unexpected barriers to successful completion such as supplier problems and part or material substitutions.

- Works in compliance with standard practice and procedures as outlined in the department's safety manual as the work environment may at time be hazardous. The need for safety requires the employee to attend safety courses and to pass this knowledge on to external subcontractors.

- Working conditions are clean and climate controlled when in the office. When outside, there can be exposure to dirt, noise, and temperature fluctuations which may be unpleasant. The potential for accidents is higher due to travel and the areas which are visited, where the employee is required to walk, bend, and lift. Interruptions can be frequent and deadlines are critical.

POSITION TITLE: OMC Engineer
REPORTS TO: Regional O&M Manager
STAFF REPORTING TO: None

DEPARTMENT: Operations & Maintenance
DATE: May 22nd 1998

PURPOSE OF POSITION:
Operates and maintains the company's mobile network to ensure its optimum performance as well as minimal downtime during network problems.

QUALIFICATIONS:
Degree in engineering or equivalent. Three years of experience in the telecommunications field.

PRIMARY RESPONSIBILITIES:

- Responds in a timely manner to all systems alarms by investigating the cause of the alarms. Provides the results of the investigation to Engineering, Customer Operations, outside contractors and suppliers who assist in troubleshooting and resolving the problem. He/she will also be required to determine the causes of equipment malfunction or failure by using sophisticated test equipment and documenting the repairs required. The focus is to resolve problems quickly in order to maintain high quality and reliable standards.

- Performs switch maintenance as it relates to call activity, translations, switch routines and growth in capacity, according to established procedures. He/she will also maintain various types of terminal devices for data communications. Part of this activity requires the employee to conduct tests with different types of sophisticated equipment in order to determine potential problems and identify substandard performance. In this capacity the employee must decide whether to replace components would appear to be in good order and must therefore know quality standards, warranties and safety regulations. The employee is required to maintain close contact with NMC, OMC, MSC FSC (Field Support Center) staff during the repair or preventative maintenance project. Keep all interested parties informed of the progress in order to deal with unexpected barriers to successful completion such as supplier problems and part or material substitutions.

- *Maintains all documents to ensure that maintenance records and testing are up to date.* Part of this includes maintaining accurate records of the equipment and parts inventory, supplier documents and drawings.

- Working conditions involve a regular requirement to be out of the office. The physical environment requires the employee to walk, climb and bend regularly to service equipment where exposure to hazards can occur. Deadlines can be critical.

OMC Engineer

POSITION TITLE: Accounts Payable Junior Accountant
REPORTS TO: AP & Payroll Mgr.
STAFF REPORTING TO: None

DEPARTMENT: Finance
DATE: May 22nd 1998

PURPOSE OF POSITION:
Ensures that the company processes its supplier and vendor invoices in a timely and accurate manner according to the policies and procedures set out in the department.

QUALIFICATIONS:
University graduate or equivalent. One year of experience in an accounting environment.

PRIMARY RESPONSIBILITIES:

- Prepares all original and proforma invoices for daily payment. To do this the employee must confirm that the various items on the supplier's invoice are accurate, and that the appropriate authorization has been secured. Any factors that are not in compliance can delay the payment of the invoice in which case the employee must apply due diligence to resolve any inconsistencies.

- Books all unpaid, non-fixed asset invoices prior to processing for payment in the SUN accounting system and ensures that all the postings are performed accurately, on time, and according to accounting policy and Romanian accounting rules and laws. The employee is also required to reconcile all entries with the SUN accounting system. Any variances need to be verified, explained, and recorded with proper notification to the manager.

- Verifies that local taxes have been calculated correctly. He/she also determines whether withholding taxes apply on foreign payments and review the appropriate Romanian tax policies, with the Tax Specialist.

- Assists in the reconciliation of all bank statements in Lei to the Accounts Payable ledger. This is critical to ensure that any variances which are found are well documented and dealt with in a responsive manner.

- Uses judgement to determine how transactions are booked through advice from his/her manager.

- Working conditions are clean and climate controlled in an open office area, with very little exposure to noise, heat fluctuations, or other physical discomforts. There is an occasional need to lift light to moderate items, but very little exposure to unpleasant situations. Interruptions are frequent and deadlines are critical. There is also the expectation that the employee will work some longer hours at peak times.

POSITION TITLE: Help Desk IT Staff
REPORTS TO: Help Desk Supervisor
STAFF REPORTING TO: None

DEPARTMENT: IT
DATE: May 22nd 1998

PURPOSE OF POSITION:
Ensures that hardware and software problems and requests issued from the IT Help Desk are identified and corrected in a timely manner.

QUALIFICATIONS:
Degree in computer science or equivalent. One year experience in computer field.

PRIMARY RESPONSIBILITIES:

- Investigates and resolves inquiries from employees (through the Help Desk Dispatcher) about hardware and software problems or general questions. This requires the employee to understand the problem quickly by applying troubleshooting techniques such as researching, testing and isolating problems in order to solve them in a minimal amount of down time.

- Installs new computer hardware and software according to standard operating procedures and tests their functionality. He/she focuses on the compatibility of the equipment to other systems, such as P.C.'s, printers, and networks, to ensure there is no negative impact. This employee also installs new software programs and subsequent upgrades. After the installation he/she is required to maintain the above mentioned processes.

- Provides on site training and consultation to customers by demonstrating efficient and effective techniques as well as security and good "computer housekeeping" practices. He/she needs to understand the different learning levels of customers so that any training is transferred effectively.

- Prepares reports which outline the problems that arise and describe the corrective action taken. When problems tend to re-occur, he/she recommends to the supervisor the corrective action required to solve the problem permanently.

- Working conditions are clean and climate controlled in an open office area, with very little exposure to noise, heat fluctuations, dust, or fumes. There is very little exposure to unpleasant situations. Interruptions are infrequent and deadlines are not critical.

TITLE: Microwave Engineer
REPORTS TO: Microwave Manager
STAFF REPORTING TO: None

DEPARTMENT: Fixed Network
DATE: May 22nd 1998

PURPOSE OF POSITION:
Designs, establishes and maintains the digital transmission links needed between the various elements of the GSM system and the country while achieving quality standards, prompt delivery at a minimum cost.

QUALIFICATIONS:
Degree in engineering or equivalent. Four or more years experience in the cellular phone microwave communications industry.

PRIMARY RESPONSIBILITIES:

- Ensures that the various design stages of the digital transmission links system are performed according to acceptable engineering standards. The employee will take an active role in interpreting and assessing functional and performance standards of the transmission link. He/she will then apply sound engineering principles and practical experience in the development of the design for the successful installation of the system. This includes optimum antenna heights and placement, as well as proper positioning of the equipment.

- Selects appropriate transmission equipment; advises purchasing with regard to material, components and equipment to be used at each site and specifies delivery of these components. From time to time the employee may be required to make decisions on component substitutions, or to revise or reconfigure a site to solve unique situations that may arise.

- Investigates design and site engineering difficulties as well as causes of failure. This has to be resolved quickly so that down time or delay in site completion is minimized. The employee also identifies and reports on defects and deficiencies in the work done by others and recommends changes in plans and specifications or on the substitution of materials to suit special conditions.

- Works as a team member with all technical departments within the company and with external parties such as contractors, suppliers and telecommunications operators in order to complete the project on time, cost effectively and to high standards. This requires effective project management skills to ensure that the various stages of the project are completed according to the aggressive schedules common within the department.

- Working conditions are clean and climate controlled when in the office. When outside, there can be exposure to dirt, noise, and temperature fluctuations which may be unpleasant. The potential for accidents is higher due to extensive travel and the areas which are visited. Interruptions can be frequent and deadlines are critical.

1925

POSITION TITLE: Payroll Accountant
REPORTS TO: AP & Payroll Manager
STAFF REPORTING TO: None

DEPARTMENT: Finance
DATE: May 22nd, 1998

PURPOSE OF POSITION:
Performs various activities in preparing the payroll for the company's employees and ensures that tax and benefit cost deductions are withheld according to company and legal requirements.

QUALIFICATIONS:
Degree in Finance/Economics or equivalent, one to two years experience in payroll field.

PRIMARY RESPONSIBILITIES:

- Prepares bi-monthly salary payments for at least 1,200 employees in an accurate and timely manner. To do this, the employee must maintain an up to date database. Part of the job requires the employee to prepare and verify tax statements of earnings indicating gross and net salaries as well as deductions such as taxes and benefits. Books, and reconciles all monthly payroll transactions.

- Verifies payroll data received from the HR Department for employees, related to new hires, transfers, terminations, or pay changes to ensure that all the required information is recorded accurately and processed according to Company policy and legal requirements. To do this the employee must be familiar with any labor law changes, company policy, tax codes, and the inner workings of the payroll system.

- Processes all withheld income taxes and social benefits payments to the government in an accurate and timely manner. This requires due diligence to ensure that the payroll ledger is reconciled and cleared of all funds owed the government. He/she also prepares and issues a monthly tax and benefit declaration to the government. The employee develops processes and implements changes to improve the efficiency of payroll procedures.

- Provides an advisory role to employees who may have questions concerning their pay, taxes withheld, government benefit deductions, etc. In this role, the employee provides information and explains how the pay and tax system operates as it relates to pay. The employee may be required to perform one of a kind calculations to adjust for pay, commissions or vacation calculations which have been calculated incorrectly.

- Monitors changes in in-house software required to support changes to the payroll process. To do this, the employee explains the needs of the department and assists in developing a "functional spec." for changes in cooperation with the systems department. Part of this involvement requires test; and debugging activities to ensure accuracy and success.

- Retains records provided by Human Resources department of employee attendance, leave and overtime so that he/she can calculate pay and government benefit entitlements using manual and computerized systems. These records are critical in keeping an accurate record of all payroll related transactions.

- Conducts a bi-annual audit of the payroll procedures and policies of the company to ensure that all transactions have been conducted according to sound accounting principles. Part of this audit includes examining the HR Department records to ensure that all required information provided to payroll is in order and complies with established procedures. He/she will submit a report of the audit findings along with any recommendations that may be required.

- Prepares and issues monthly the taxes and benefits declaration for the government.

- Administers special payroll deductions for employee purchases from the company.

- Working conditions are clean and climate controlled in an open office. There can be some exposure to unpleasant situations when dealing with pay. By-monthly deadlines are critical and inflexible. There is also the expectation that the employee will work some longer hours at peak times.

POSITION TITLE: Dealer Area Manager **DEPARTMENT:** Indirect Sales
REPORTS TO: Director, Indirect Sales **DATE:** May 22nd 1998
STAFF REPORTING TO:

- Dealer Channel Managers (10)

PURPOSE OF POSITION:
Plans, organizes, directs and implements the sales strategy of a specific region through Dealers and sales office activities to ensure that sales targets and selling expense are on budget.

QUALIFICATIONS:
Degree in business or equivalent, with three years experience in the sales field.

PRIMARY RESPONSIBILITIES:

- Ensures that all staff are fully trained in department policies and procedures; that they have established KRA's and objectives in place, and they are motivated and performing to established standards. This requires the employee to set staff objectives, review their performance and where required, take corrective action to deal with below standard performance. When warranted, the employee makes salary recommendations for the staff.

- Develops the department's annual budget and monitors the results on a monthly basis to assess any variances. Negative variances are investigated and explained to his/her manager, and a process is developed to prevent future negative variances.

- Directs the planning, coordinating and evaluation of the department's overall sales results on a weekly basis and takes corrective action within departmental guidelines when negative variances appear. This requires the employee to be proactive in market or customer needs analysis so that potentially negative situations can be anticipated and dealt with before they become a problem. A close liaison with Customer Operations, Engineering, Marketing, Finance and IT must be maintained. The focus is excellence in customer service in order to achieve acceptable sales levels.

- Resolves difficult and complex customer sales issues in the fastest possible manner according to company policy. Any deviation from policy needs to be resolved and approved by the Director, Indirect Sales. These complex issues need to be factored into the business plan in order to eliminate them from reoccurring.

- Advises management on the appropriate policies and strategies to adopt in the promotion of the company's reputation as a market leader. This requires understanding competitive practices, cost budget analyses, the relationship between policy development and company values and the potential for these policies and strategies to enhance the company's sales performance. To do this, the employee must have well trained, knowledgeable and motivated staff and communicate effectively with all related departments.

- Working conditions are clean and climate controlled when in the office. When outside, there can be exposure to dirt, noise, and temperature fluctuations which may be unpleasant. The potential for accidents is higher due to extensive travel and the areas which are visited. Interruptions can be frequent and deadlines are critical.

POSITION TITLE: Training Specialist
REPORTS TO: HR Development Mgr.
STAFF REPORTING TO: None

DEPARTMENT: Human Resources
DATE: May 22nd1998

PURPOSE OF POSITION:
Administers and conducts both in-house and purchased training programs on a variety of topics to all levels of employees up to middle management.

QUALIFICATIONS:
Degree in Social Sciences or equivalent. One year experience in conducting training sessions.

PRIMARY RESPONSIBILITIES:

- Conducts in-house Human Resources related training programs which have been either designed in-house or purchased from an external source. In this role the employee redesigns and modifies in-house training programs to meet specific client needs. The deficiencies of the original program design must be understood in order to make the appropriate changes.

- Assesses how well the student has learned by developing and applying assessment techniques during the training program. Any evidence of poor learning transfer must be corrected by the employee. To do this the employee must understand the learning growth of an individual relative to that of the group.

- Coordinates with various training vendors as to the suitability of their external training packages and determines modifications necessary for internal relevance. This requires the employee to have in-depth knowledge of business needs, learning theory, and the structure and content of the external training packages available.

- Oversees the maintenance of a training database to ensure complete and accurate records are kept on all employees.

- Working conditions are clean and climate controlled in an open office area. There is very little exposure to unpleasant situations. Interruptions are infrequent and deadlines are not critical.

POSITION TITLE: Warehouse Clerk
REPORTS TO: Warehouse Supervisor
STAFF REPORTS: None

DEPARTMENT: PAD Department
DATE: May 22nd 1998

PURPOSE OF POSITION:
Receives and ships materials, parts, and equipment and verifies that the information contained on the packing slips match the contents of the shipment and routing instructions.

QUALIFICATIONS:
High School diploma or equivalent. One year experience in a warehouse environment.

SPECIFIC RESPONSIBILITIES:

- Processes all required documents for all material, parts and equipment arriving and leaving the facility. The employee has to ensure that the information on the packing slips, such as address, quantity, customer account numbers, routing, and delivery date, is correct. He/she must be on the look out for damaged items and any problem orders and must keep records of goods shipped via both normal and urgent mail routings.

- Uses motorized and manual equipment to load and unload materials, parts, and equipment from suppliers' and company trucks. He/she is required to move the received goods to the appropriate shelf location and to retrieve the above items from shelves in preparation for shipment. The employee also wraps and packs items for shipping according to the methods specified for each shipment. He/she prepares the necessary shipping documents and records all transactions in the computerized tracking system.

- Assists in the physical counting of inventory according to well established procedures.

- Maintains a clean, safe and orderly work area so that numerous shipping and receiving activities can occur concurrently.

- Working conditions are generally unclean and not climate controlled in an open warehouse area. There is exposure to noise, heat fluctuations, dust, or fumes. Interruptions can be frequent and deadlines are somewhat critical. The risk of accidents are increased due to the use of forklift trucks.

POSITION TITLE: Customer Service Rep.
REPORTS TO: Customer Service Mgr.
STAFF REPORTING TO: None

DEPARTMENT: Customer Ops.
DATE: May 22nd 1998

PURPOSE OF POSITION:
Provides courteous and efficient service to existing or potential customers by responding to inquiries about the company's products, services, pricing, and contractual issues. The employee's focus is customer satisfaction.

QUALIFICATIONS:
High school diploma or equivalent. Less than one year customer service or sales experience.

PRIMARY RESPONSIBILITIES:

- Receives and processes incoming telephone calls from potential individual consumer and corporate customers regarding product and service features, pricing, delivery, contractual conditions, warranty coverage, and service support. The employee develops qualified leads by selling the company image; he/she encourages individuals to visit a dealer or a company corporate store; or contacts the company sales executive about the potential customer.

- Receives and processes incoming telephone calls from existing individual and corporate customers regarding new product features such as terminals, packaging, pricing, delivery, and warrantees. He/she is also required to discuss invoices and billing inquiries.

- Processes customer complaints in a courteous and professional manner in order to resolve any issues within his/her control. Knowledge of the relevant information and facts and an understanding of the issues are required by the employee to deal with the complaint promptly and within established guidelines. More complex complaints are passed on to his/her manager for review.

- Works with customers who wish to terminate their contract with the company. This requires the employee to understand the customer's position and develop ways to retain the customer's account and interest in the company. This reactive form of selling requires the employee to compare competitive products, services, and prices and to appeal to the customer's original reasons for wanting a cell phone.

- Acts as a liaison with suppliers and sales staff to expedite delivery, develop qualified leads, and pass on complaints or requests. Technical problems and inquiries are referred to technical support staff.

- Work environment is clean and climate controlled in a confined open space. Complaints from customers can be stressful as well as maintaining customer retention levels.

POSITION TITLE: Marketing Assist. (Logistics) **DEPARTMENT:** Event Marketing
REPORTS TO: Event Marketing Manager **DATE:** May 22nd 1998
REPORTING STAFF: None

PURPOSE OF POSITION:
Oversees and implements the planning and organization associated with major exhibits assembled by the Event Marketing department.

QUALIFICATIONS:
High school diploma or equivalent. One year experience in Event Marketing.

PRIMARY RESPONSIBILITIES:

- Oversees all the major components of marketing events to ensure that they are available when required. This includes making sure all signage props, marketing displays, display booths, security, and floor space layout are in place to the satisfaction of the manager. Makes arrangements to have exhibits made locally for the event.

- Assists the Event Marketing team in planning and organizing various events and provides feedback on and possible solutions to anticipated problems. He/she is required to follow up on any issues and resolve them before the scheduled event.

- Participates in the preparation, set up, installation and dismantling of the various components and stages of the event. He/she ensures that the various stages are executed in accordance with standard procedures and formats.

- Organizes travel arrangements and if required, accommodations for the marketing team. He/she also arranges for the event materials to be delivered to and from the event by coordinating with fleet management to meet transportation requirements.

- Develops and implements a policy and plan to ensure that the exhibition stock is well maintained, refurbished or replaced according to good marketing standards to promote the company's image.

- Working conditions are clean and climate controlled in an open office area, with some exposure to noise, heat fluctuations, dust, or fumes. There is exposure to unpleasant situations. Interruptions are infrequent and deadlines are critical.

POSITION TITLE: Executive Assistant
REPORTS TO: Vice President
STAFF REPORTS: None

DEPARTMENT: All Departments
DATE: May 22nd 1998

PURPOSE OF POSITION:
Performs advanced administration and coordination duties of a responsible and confidential nature.

QUALIFICATIONS:
Post Secondary School diploma in Administration or Office Management or equivalent. Three years of office support experience. Aptitude for detailed work and high proficiency in Microsoft Office is required.

SPECIFIC RESPONSIBILITIES:

- Provides full administrative support for the VP Team and back up support for the department. The employee is responsible for word processing, formatting and drafting correspondence, reports, presentations and other material. Material for reports requires the preparation of graphs, charts, and numerical tables from data which is either supplied or must be obtained from searching files and records.

- Arranges and schedules appointments, meetings and conferences for the VP and department, preparing briefing notes for use at/and after meetings; makes travel arrangements and processes the VP's expense reports.

- Monitors the department's monthly budget by reconciling expenditures, reporting positive and negative variances to the VP, and explaining negative variances. The employee also assists in the preparation of the annual department budget for presidential review.

- Answers internal and external telephone calls and receives guests. The employee determines the purpose of the call or visit and handles less critical issues. From time to time he/she is expected to screen potentially unpleasant confrontations. Unresolved matters are forwarded to the VP or Director.

- Uses office equipment such as the fax machine, a personal computer, the photocopier and a calculator. The employee also maintains office supplies, placing orders for supplies and verifying that the supplies are delivered.

- Working conditions are clean and climate controlled in an open office area. There can be exposure to unpleasant situations. Interruptions are frequent and deadlines are somewhat critical.

POSITION TITLE: Cashier
REPORTS TO: Corporate Store Manager
STAFF REPORTS: None

DEPARTMENT: Sales Support
DATE: May 22nd 1998

PURPOSE OF POSITION:
Takes cash and other forms of payment for company products and services sold in the company store.

QUALIFICATIONS:
High School diploma or equivalent. One year experience in a retail or banking environment as a cashier/teller.

SPECIFIC RESPONSIBILITIES:

- Takes in all forms of payment in exchange for company products and services. This requires the employee to be knowledgeable about prices, product mix, store policy regarding customer service, sales techniques, and cash management.

- Prepares daily receipts of sales transactions showing the number of products and services sold by category. This requires the employee to know each item category and ensures that all sales are recorded accurately before the daily store closing. He/she ensures that cash receipts are transferred to the bank before the bank closes.

- Reconciles the cash intake for each item against sales for the day, noting and explaining negative balances.

- Wraps and places merchandise in bags or other store containers as required.

- Working conditions are clean and climate controlled in the store area, with very little exposure to noise, heat fluctuations, or other physical discomforts. There is an occasional need to lift light to moderate items, some exposure to unpleasant customer situations. Interruptions are infrequent and deadlines are not critical.

- Decision Making p-4-12
- Business Impact p-4-15
- Working Conditions p-4-16

KNOWLEDGE

Summary

Knowledge is the factor which reflects how much one needs to know to do the full job competently and satisfactorily. This factor does not measure how much knowledge one has. It evaluates what type of knowledge one must have to perform the position's responsibilities, Key Result Areas (KRAs), and objectives.

Basic knowledge refers to the preparation, education, on-the-job-training and work experience required in order to qualify for the position.

The combination of education and work experience can be a way to gain knowledge. Basic knowledge refers to all knowledge, however obtained. Generally, knowledge obtained in an academic environment can be gained much more rapidly than knowledge that must be learned on the job. Therefore, because knowledge obtained on the job must be learned gradually, over time, substantial work experience will be required to justify equating it to education.

Work experience measures the minimum length of time required to be eligible for the position and to be capable of assuming the position's responsibilities. Over time, the employee should be capable of attaining satisfactory competency levels of quality and quantity. Consideration is given to the amount of time required to perform the position competently, on the basis of continuous progress, rather than on lapsed time.

When rating knowledge, it is important to consider both the thoroughness and the variety required to do the position. Is the position a "deep" specialist with a narrow range of scope (knows a lot about a narrow field) or is the position a generalist with a wide range of different areas (knows a little, but about a lot of different areas).

FACTOR A **POINTS 80**

- Ability to follow very clear, detailed instructions normally associated with some mental tasks but mainly manual tasks.
- Skills require ability to understand oral and written instructions and ability to perform simple mathematics. Read and write and keep simple records.
- Works very close to standard procedures. Duties are normally singular in nature and highly repetitive.

Education - Partial High School
Experience - None
Non graduates - 4 years of related experience

FACTOR B **POINTS 160**

- Ability to follow basic level of instructions and simple assignments associated with more mental tasks than in "A".
- Skills require the ability to understand specific procedures associated with the position, and to perform more moderate mathematics tasks.
- Very little freedom to move away from work routine.

Education - High School graduate
Experience - 6 to 12 months
Non graduates - 4 years of related experience

FACTOR C **POINTS 240**

- Instructions tend to be replaced by general office routines and procedures. The position is more assignment oriented but still in a structured approach.
- Ability to understand the assignment and make whatever adjustments are necessary in the position's work flow in order to achieve results.
- Some minor deviation from the work routine is permitted based on past practices or established procedures.
- Duties are more varied but related only to the area of the position's responsibility.

Education - High School graduate plus specialized courses
Experience - 1 to 2 years
Non graduates - 6 years of related experience

FACTOR D **POINTS 320**

- Skills gained through a lot of work experience or through specialized position - related training.
- Ability to understand moderately complex work procedures and/or the operation of varied and moderately complex equipment.
- Ability to understand the basic requirements of the department and the impact the position has on others.
- Freedom to move away from the work routine is permitted without supervisor's prior approval.
- Supervisory positions provide direction such as scheduling assignments, monitoring results and providing feedback to their support staff in the department. May also be required to perform the same work as their staff.

Education - College
Experience - 2 to 3 years
Non graduates - 10 years of related experience

FACTOR E **POINTS 400**

- Basic understanding of the principles and procedures of the department.
- These positions are normally associated with entry level professionals, or, with advanced skills acquired during their work experience while in a "D" Knowledge position.
- For short term results, employees are required to know "why" things happen, "what" needs to be done, and "how" to go about doing it.
- Supervisors do not normally perform the duties of their support staff but are required to have as much Knowledge. These positions are tactically focused on short term results. They are required to oversee the work of "D" Knowledge positions by scheduling assignments, monitoring the flow and the results of the work, providing advice, and setting objectives.

Education - Undergraduate university degree
Experience - 4 to 6 years
Non graduates - 12 years of related experience

FACTOR F **POINTS 480**

- Thorough knowledge, understanding and application of one or more theoretical principles. These positions are considered seasoned in nature in that the basic knowledge was acquired during their work in "E" Knowledge. These positions require substantial and relevant work experience in the field.
- These positions require the ability to apply the specialized knowledge in a wide variety of situations, and are required to interface with their internal and/or external customers.
- These positions are strategically focused on the long term results.
- Managers in these positions do not perform the work of their support staff, instead they provide direction to "E" and "D" Knowledge positions.

Education - Undergraduate degree for Management and for professionals with rare skills.
Experience - 8 to 10 years
Non graduates- 16 years of related experience

FACTOR G **POINTS 560**

- Positions requiring senior management authoritative knowledge within and beyond the organization. These positions require a thorough level of technical and general management knowledge with complete command of theories, principles, practices and techniques gained through extensive work experience.
- Responsibilities are extremely diverse, complex and have an impact throughout the organization and beyond.
- These positions oversee the work of "E" and "F" Knowledge professionals and managers whose work activities do not require supervision.
- These positions are usually for senior management who provide for the integration of all functions within a major activity.

Education - Undergraduate university degree
Experience - 10 or more years
Non graduates - 20 years experience of related experience

COMMUNICATIONS

Summary

This factor considers the oral and written communications skills required to accomplish the position's key responsibilities. In addition, there is a range of communications skills, from providing oral or written information for standard requests, to persuading and influencing various audiences. Some examples include selling concepts or ideas to external customers, or communications involving managing people. The level of integrity and discretion that is required for the protection of confidential information is also considered.

Consideration should be given to whom the communications is directed, whether internal or external, the amount of persuasion required, the frequency, the purpose and the critical nature of the communications being provided to enhance customer service.

FACTOR A **POINTS 85**

- Ability to provide non technical oral and written communications to internal/external customers and suppliers for the purpose of requesting or transmitting information, asking questions or securing information. Positions at this level require basic conversational and written skills and courtesy to exchange non-confidential information and provide assistance.

FACTOR B **POINTS 170**

- Required to use some oral and written persuasion skills to influence people to get them to provide information or services. These positions deal with internal/external customers and suppliers who are not regularly required to deal with the employee. Somewhat confidential.

FACTOR C **POINTS 255**

- Understanding, influencing and/or serving people are important in performing the job. Oral and written skills of persuasion or assertion as well as organizational and employee sensitivity are at times required to influence minor behavioral change.
- These positions normally have regular contact with staff within the organization or with customers, suppliers and the public. The requirement for external contact does not necessarily demand a high level of communications skills, but will require a higher level found in "B". Exposure to somewhat confidential information is required to perform the job's requirements.

FACTOR D **POINTS 340**

- Jobs at this level require well-developed oral and written skills to explain mostly confidential technical or complex information. Understanding others and effective speaking in individual or group situations are important. Dealing with others occurs in a variety of roles and authority levels, both inside and outside the organization. Must have well-developed understanding of human relations so that he/she can influence behavioral change. Exposure to confidential information is required to perform the job's requirements.

FACTOR E **POINTS 425**

- Critical communications is required to convince an external audience to accept a service or concept where the result is critical to achieving the position's objectives. These positions are critical in convincing external audiences, who may have the authority to turn down or reject recommendations or services. The communications process is very confidential.

PROBLEM SOLVING

Summary

This factor refers to the type of thinking necessary to solve the problems encountered in performing the major responsibilities of the position. It measures the level of difficulty in using analytical and judgment skills that involve identifying, searching and selecting the best available action in resolving problems.

Positions with broad, unlimited objectives will be evaluated higher than positions that are controlled by established policies and procedures. Also, positions that have minimal recourses and supervision will be rated higher than positions that can receive guidance from their supervisor or readily available resources to solve difficult problems.

Positions that involve a number of unrelated disciplines, which must be integrated to meet different objectives, will be rated higher than positions that are involved in a single area.

Positions that require a considerable amount of time to identify problems, define a problem-solving approach, research alternative solutions, and develop and document recommendations will be rated higher than positions that can solve problems in less time.

Positions that have no guidance from past practices and who usually work with new and unique situations, will be evaluated higher than positions that address similar problems from day to day or from month to month.

As the rating increases, the thinking or analytical skill becomes more difficult. Although there are the same number of sub-factor levels (7) for Knowledge and Problem Solving, there is not an automatic one-to-one relationship. For example, level "E" in Knowledge will not necessarily correspond to a level "E" in Problem Solving. Generally, a Knowledge rating of "E" will be less than "E" under Problem Solving. However, where the position has a primary problem solving focus or some unique specialized focus the same rating may apply. Caution about automatic cross over should be exercised.

FACTOR A **POINTS 80**

- This level involves a single activity of a very uncomplicated and repetitive nature. Minimal judgment and interpretation are required.
- Instructions are usually oral and specify in detail the sequence and timing of the tasks to be undertaken with little opportunity to consider a different way.
- Very little analytical ability required. Any analysis involves simple comparisons between numbers or letters as the problems that are encountered tend to be routine and familiar. There is usually an obvious choice to resolving the problem.
- Each problem situation is nearly the same as the prior one. Through a simple choice the correct solution is made. Any departure from normal situations are referred to the supervisor.

FACTOR B **POINTS 160**

- This level involves several activities of an uncomplicated and somewhat repetitive nature. Little judgment and interpretation are required.
- These positions carry out specific assignments according to established work procedures or until instructed to do something different. Instructions usually provide limited latitude to consider variations in a sequence of procedures based on situations encountered within the work setting. These instructions are usually oral and/or written.
- Some analytical ability is required in order to gather and interpret data in situations where the problems are not difficult or complex. Solving a problem is normally done based on past precedents or alternatives that have occurred before.
- Any departure from known procedures are referred to the supervisor.

FACTOR C **POINTS 240**

- The tasks are somewhat diverse, of limited difficulty, and involve a number of complicated variables. Some judgment and interpretation of the problems are required.
- The tasks to be undertaken are procedural or have specific precedents established. Latitude is permitted to follow the most appropriate procedure or precedent because of changing work conditions.
- This level requires the employee to make choices in problem solving situations. The incumbent must be able to recognize and understand a situation in order to determine which procedure to follow.
- These positions are confronted with multiple choice problem situations but through prior exposure or experience, the employee has learned which choice is most appropriate.

FACTOR D **POINTS 320**

- Due to changing priorities or different situations encountered, the employee has latitude to consider the best procedure and sequence of procedures, from a variety of choices.
- Unusual problem situations that are different from the standard procedures and instructions are referred to the supervisor/manager for assistance or further direction.
- These positions require problem solving choices of learned practices in previous situations that may present some new material. However, the material conforms to established patterns.
- When confronted with a situation which requires judgment or a decision to be made, the employee first identifies the problem and then searches through areas where the appropriate solutions can be found. During this search, the employee is confronted with a number of different questions, each having several different answers.
- Decisions can be made rapidly based on prior knowledge and experience.
- Some creativity and initiative are required in solving problems.

FACTOR E **POINTS 400**

- Problems to be solved are diverse, difficult and somewhat complex, involving a number of complicated situations. A high degree of original and independent thinking is required at this level.
- These positions have latitude to consider whether new procedures may have to be developed, consistent with current policies, or existing principles, in order to solve the problem. The "what to do" is clearly stated by the manager but the "how" is largely determined by the employee's own judgment, based on principles and experience.
- Policy interpretations, even though clearly defined, are less limiting than procedures. The level of conceptual thinking requires the employee to interpret what they have learned and then determine how to apply this knowledge to unique situations using whatever policies are available.
- Complex problem resolutions are infrequently referred to someone else as the incumbents in these positions are usually considered fully seasoned in their area of expertise.

FACTOR F **POINTS 480**

- Problems at this level are very diverse, difficult, complex and involve a number of complicated variables within a major function.
- Specific objectives establish what general things must be accomplished within the framework of the organization's operating policies. The incumbent must set the plan, determine the priorities and prescribe the processes needed to achieve the objectives.
- The "what to do" is usually specified by senior management, while the specifics and details of "how to do it", is left up to the employee.
- These jobs require thinking to resolve problems that include circumstances, facts and issues that are different than those that have been encountered before. This level of thinking requires the employee to do difficult thinking where the solution requires lengthy researching and analyzing of data, defining the problem, and considering which recommendations to make from a number of alternatives.
- In these situations much thought is given to the various alternatives and the impact of any possible consequences before making a final decision.

FACTOR G **POINTS 560**

- Problems at this level are extremely diverse, difficult, complex and focus primarily on long range strategic direction for multi-departments and/or the entire organization.
- These positions have the latitude to consider what activities must be undertaken in a multi-functional area to achieve the goals of the organization.
- The "what" is specified in only very general terms and the "how to" is left up to the incumbent to determine.
- These positions are required to combine Knowledge and Problem Solving within a major multi-department function that has an impact on the business strategies of the organization.
- These positions are confronted with the unknown. The situations faced have little or no precedent to guide the Problem Solving process. The incumbent must originate new concepts or approaches with little guidance from others. Innovations are state-of-the-art. This applies to truly creative thinking about something never done before, within or outside the organization.

DECISION MAKING

Summary
Every position makes decisions in order to meet its specific objectives. This work environment has established procedures and reporting relationships in order for an incumbent to take action or make a decision. Consideration is given to how a position is limited by instructions, rules, procedures, precedents and policies, as well as the degree of freedom, guidance or supervision required to make decisions.

In general, policies describe the "what" of a subject, procedures detail the necessary steps to follow through a policy (how, where, when, by whom), and instructions outline the specifics of how to do something.

The following definitions are guidelines:

Instruction - detailed "how to do" directions, such as the instructions which usually accompany electronic devices.
Routine - a daily task or frequently performed task; often done automatically.
Procedure - taking specific step by step courses of action.
Standard - something established by authority to be used as a reference point or model.
Precedent - some past practice that serves as an example to justify a practice to follow in similar situations.
Policy - a settled course or philosophy adopted by management to be followed when making decisions.

In the following decision making levels, levels A and B require decisions within well defined rules and detailed instructions. Very little discretion or interpretation is required. Levels C and D require decisions within defined procedures with some interpretation required dependent on past practice. Levels E and F require decisions within established policy, requiring broader interpretation. Level G requires thinking about concepts, principles and general guidelines with a broad organizational perspective.

Factor A **POINTS 80**

- These positions are given clear instructions, oral or written, which state the step by step sequence of making basic decisions. While the incumbent can set their own pace and make limited decisions about the order or content, very little opportunity is given to change the process without first seeking permission. Supervision is very close and always available to direct any changes in activity.

Factor B **POINTS 160**

- Methods and procedures are well defined. Only general instruction is provided. Specific assignments are carried out according to established work routines or until instructed to do something different. Instructions are usually specific and detailed but less controlled then "A".
- These positions are permitted to make decisions about the sequence of various assignments based on the changing requirements of the assignment. Supervision occurs before, during and after the fact in most situations.

Factor C **POINTS 240**

- Methods and procedures are somewhat defined and incumbents must demonstrate their ability to make sound decisions to achieve the position's objectives.
- Normal practices and procedures will permit the incumbent to make choices in decision making situations about variations in both work sequence and work routine. Instructions are more general in nature. Supervision is readily available when required.
- These positions usually have a greater variety of situations where decision making is more diverse than "B", within the position's area of responsibility.

Factor D **POINTS 320**

- Due to changing priorities or different situations, the incumbent has the opportunity to consider which among many procedures should be followed, and in what sequence to achieve the required position's objectives.
- These positions have greater ability to make independent decisions by modifying established practices and procedures. Changing established procedures and practices is permitted as long as the results meet acceptable standards of performance. Supervisor review, if required, is usually after the fact.

Factor E **POINTS 400**

- These positions have the opportunity to consider whether new procedures may have to be developed consistent with current policies or existing principles, in order to achieve required objectives. The "what" by the manager is clearly stated, but the "how" is largely determined by the incumbent's own judgment based on principles and experience.
- These positions are given the decision making authority needed to achieve objectives, provided that the activities are consistent with functional policies and precedents. The level of conceptual thinking requires the employee to interpret what they have learned and then decide how to apply this knowledge. Supervisory advice is available when required.

Factor F **POINTS 480**

- Specific objectives establish what generally has to be accomplished within the framework of the organization's operating policies. The incumbent must set the plan, determine the priorities, and decide on the processes needed to achieve the objectives.
- These positions can decide what the general results will be. It is up to the incumbent to call on available resources to meet the objectives. They usually report to a major functional head in the organization and are free to make decisions provided that the activities are consistent with operating polices and precedents within the function. Actions that impact other functions or operating areas usually require approval before they are decided upon.

Factor G **POINTS 560**

- These positions establish functional policy of a far reaching impact on the organization. These decisions are typically made by the Senior Management Group. They have the latitude to consider what activities must be undertaken within a major functional area to achieve the goals of the organization.
- The "what to do" in applying broad strategic initiatives is largely left up to the employee.

BUSINESS IMPACT

Summary

This factor measures the level of influence the position has on contributing to its department, customer or company results. The total department's contribution to company results is influenced by the contributions made by each position. Some positions can have a direct impact on their department, customers or company results while others have an indirect impact. Generally, positions in a support role, which provide or maintain information for those who advise, analyze or recommend to others, usually have less of an impact than those positions which are directly accountable for the final results.

The degree of influence the position can have not only reflects the impact it can have on its department's results, but also the type of impact the position can have so that others may make business decisions. Both are important for contributing to the company's performance. The former provides the foundation for sound business support while the latter takes on more risk because the accountability for the action is more visible.

FACTOR A **POINTS 140**

- These positions are generally task oriented, where the nature of the work being performed is usually of a day to day nature and has very little impact on the results of their department, customers or company results. There may be some infrequent activity, on a relief basis, to provide routine support.

FACTOR B **POINTS 280**

- These positions usually provide routine information and/or advice as a support service to their department, customers or company results. They also provide routine information as well as standard and routine support. The work is thoroughly checked before going on to the next step.

FACTOR C **POINTS 420**

- These positions are accountable for providing advice, analysis and/or recommendations as a support service to their department, customers or company results. These positions may rely on past policy interpretation in order to perform their role. These positions are generally in a support role and do not have authority to take action as they generally recommend action. Complex analysis is a regular part of the position. These positions would actively check the work of "B" positions.

FACTOR D **POINTS 560**

- These positions have a direct accountability on their department or company results and will play a major roll in influencing their customers performance. These positions can develop business strategies and policy, be in constant contact with external customers, and are held accountable for the end results of the area they manage.

o deadlines
o interruptions
o unpleasant confrontations.

WORKING CONDITIONS

Summary

Working conditions describes the physical environment in which the work is performed. Especially important are any conditions in the physical environment which the employee may find unpleasant or hazardous. Some aspects of the work environment may negatively affect his or her physical well-being.

In some positions there can be conditions that cause stress. These include dealing with difficult situations (usually external), work activities under strict deadlines whether scheduled or not, the frequency of interruptions, and whether extensive overnight travel is required. Each person reacts to stress factors differently. However, the critical test is to focus on what the typical situation may be in the position.

FACTOR A **POINTS 45**

- Minimal discomfort or risk of accident or ill-health. Office temperatures are climate controlled with no exposure to outside conditions. Rarely subjected to mechanical or machinery noises.
- There may be contact with unpleasant people, but the issue is normally referred to the manager. There are some interruptions and deadlines, but they are usually manageable.

FACTOR B **POINTS 90**

- Most of the work is performed inside their regular office environment with some requirement to leave to another area that has a higher exposure to discomfort such as heat, cold, noise, dust or fumes.
- Contacts with unpleasant people are handled in their area of expertise. Disruptions are more frequent that may interfere with critical deadlines.

FACTOR C **POINTS 135**

- Regular or irregular exposure to temperature extremes, noise, fumes which cause frequent periods of extreme discomfort. There can be a substantial risk of accident or illness. Most of the work is performed outside of a regular office environment.
- Deadlines are critical and important, while most are predictable, there are requirements to perform ad hoc projects that can add to the workload. Interruptions are more frequent, whether from staff or external sources, that increases the pressure for meeting deadlines. Overnight travel may be required. Dealing with external customers is frequent and in most cases involve dealing with difficult matters.
